x = independently organized TED event

AND THE DAY AFTER ?

The day after seems far but is right here, right now.

Is a shared common future possible? Our world and climate are changing. Are society, economy or justice following? The free web - internet is dead but is still out there. Do we have a plan to save it? Platforms and data provide solutions and challenges. How can we move beyond them? Are we Glocals, global and locals, all the same?

The day after is today, full of contradictions, fears and hopes.

TED^xGeneva
x = independently organized TED event

Every year since 2013, the TEDxGeneva team organizes two editions of the famous TEDx conferences in Geneva. The first is in English, at spring time, with the partnership of UN-ITU since 2016. The second is in French, during autumn, thanks to our partnership with the University of Applied Sciences in Western Switzerland (HEG-GE and HES-SO).

For each edition, we invite about 10 visionaries and practitioners of socio-economic transition to share their ideas and experiences, to inspire and challenge us. All of this takes place in a relaxed and creative atmosphere, with networking cocktails following the talks and multiple opportunities to meet and connect with familiar and unlike people.

Themes are deliberately open to allow diversity of topics and new ideas to spark.

TED and TEDx : a global and regional community with many superlatives

-  More than 3,2 million daily views of 2,400 TED talks;
-  More than 3,000 TEDx conferences in 126 countries within the past 8 years;
-  27,000 volunteers translated over 112,000 talks in more than 114 languages;
-  More than 10,000 world-class speakers
-  Conferences are filmed to ensure dissemination to as wide a public as possible
(Creative Commons license BY-NC-ND : without commercial use, without modification).

TED
Ideas worth spreading

TED was born in 1984 out of Richard Saul Wurman's observation of a powerful convergence among three fields: Technology, Entertainment and Design. The first TED included a demo of the compact disc, the e-book and cutting-edge 3D graphics from Lucasfilm, while mathematician Benoit Mandelbrot demonstrated how to map coastlines using his developing theory of fractal geometry.

Meanwhile the scope of presenters broadened to include scientists, philosophers, musicians, business and religious leaders, philanthropists, and many others. TEDx was created in the spirit of TED's mission, "ideas worth spreading." It supports independent organizers who want to create a TED-like event in their own community.

**AND THE
DAY AFTER ?**

The future is in business as commons

SAMANTHA SLADE

The future is in business as commons.

In a world where business models are changing and even the traditional notion of work has lost its fit with current paradigms, Samantha Slade an innovator and pioneer in organizational and business models will present a new organization mindset focused on compensation as conversation, co-governance and sharing and collaboration.

Samantha is driven by the transition to future paradigms. With a background in anthropology, she pioneers novel organizational models and practices. Ten years ago she cofounded two businesses – Percolab, an international co-creation and co-design company and Ecto a co-working cooperative in her home city Montreal, Canada. Samantha works with governments, startups, and professional associations and foundations to tackle their complex challenges. She also co-creates commons based collective impact initiatives and platforms.

Engaged in the commons and social innovation movements, Samantha is currently writing a book - Going Horizontal – Creating a Non-hierarchical Organization, One Practice at a Time (to be released in October 2018 with Berrett-Koehler Publishers). Samantha believes that organizations can be a microcosm of the world we want to live in.

It's time to build our own Internet

ANDRÉ STALTZ

The world is beginning to learn about problems of the smartphone era that affect everything from our minds to our politics. But the smartphones are not to be blamed. The infrastructure of the Internet, often hidden from our sight, provided the technological foundational for the problems we are seeing today. It is possible to build an alternative Internet made with modern wireless technologies and new software, that make a new foundation for freedom in the digital era.

André is developing software for the new Internet, and blogs about the current macroscopic changes in Cyberspace. He wrote viral blog posts such as "The Web began dying in 2014", "A plan to rescue the Web from the Internet", and "Layers of the Internet Economy". He works as an open source programmer funded by donations, and is developing a free and decentralized social network for phones, together with other pioneers. André also teaches programming through workshops and conference talks, having had spoken at dozens of conferences around Europe.

With 7 years of professional experience in software engineering, internet entrepreneurship, open source peer-to-peer systems, and mobile app user interfaces, André has a holistic view of the industry. He graduated MSc in Computer Science (Distributed Systems) from Aalto University (Finland) and BSc in Computational Mathematics from UFMG (Brazil).

The Sausage of the Future

CAROLIEN NIEBLING

The sausage is one of mankind's first-ever designed food items. A paragon of efficient butchery, designed to make the most of animal protein in times of scarcity. Now, again in times of protein shortage, a molecular chef, a master butcher and a designer have teamed up to look into sausage production techniques and future potential ingredients to design the sausage of the future.

Following her bachelor degree at the ArtEZ Arnhem Academy of Visual Arts in 2007, Carolien worked for several years as a freelance designer in various fields. Then she started in 2012 the Master in Product Design at ECAL, Ecole Cantonale d'Art de Lausanne, Switzerland, to explore and specialize in food and research related design. After her graduation in 2014, she became assistant for the Master Product Design at ECAL. Additionally, she worked on her research project called "The Sausage of the Future", which has been awarded the Grand Prix at the Design Parade, Hyères, and the Hublot Design Prize, both in 2017. Companies she worked with: SIGG (during ECAL), Woolmark (during ECAL), Nestlé, HES-SO, Rabobank, and the Dutch Design Week.

Carolien's work creates a bridge between science and food, using design as the medium to do so. Food is fascinating because it is an ever-evolving substance where development will never stop.

Taxing Robots: A solution for the Future

XAVIER OBERSON

We have recently seen a tremendous development of AI and robotics in particular since recent last years. This development is positive. But the use of robots, in the future, raises also concerns : its impact on jobs. We therefore need to think about solutions in this context because if this occurs, a triple negative effect could arise :

Loss of revenues for tax, additional financing needs from the social security and the decrease of consumption.

To minimise this triple negative effect, there is a solution: taxing robots or the use of robots.

Xavier Oberson is Professor of Swiss and International Tax Law at the University of Geneva since 1994. After his studies at the University of Geneva where he obtained a law degree, a Master of Advanced Studies and a Doctorate (PhD) in law in 1990, he pursued his studies and research at the Harvard Law School where he finalized a LLM and also completed the International Tax Program (ITP) in 1992.

In addition, he is member of the Board of the Montreux Jazz Festival, President of the Montreux Jazz Artists Foundation and of the "Centre d'Art Contemporain" (Contemporary Art Center) in Geneva.

In 2012, he was awarded the "Step Private Client Awards. The Geoffrey Schindler Award for Outstanding Contribution to the Profession".

Adolescents : Should we trust them?

MATHILDE CHEVEE

After 15 years in management positions in Marketing and Innovation in major telecommunications groups and aerospace, Mathilde is now dedicated to the prevention of risky behaviors in adolescents. She accompanies young people who are dropping out of school and intervenes as a marketing and social innovation consultant with associations. She is founder of OKAIROS.life, an association committed to the development of new prevention strategies by teens for teens using new technologies. Mathilde is also Marie Deputy, delegate to the Youth Service of Marie de Saint Julien en Genevois and has been co-chair of the Swiss association of Professionals Consultants against Violence in Switzerland.

Individualistic? ego-centric? Selfish? constantly connected. Can we trust the millennials and post millennials to run our future? Working with young people has been a life changing experience. It just requires a mind-shift and mutual trust.

Evolution-Assisted Design : I am God, and so are you

PATRICK DONALDSON

be use for more; perhaps the rules of society. Inspired by the same forces that created life, it may be possible to model evolving systems that help us in the challenges that lie ahead.

Fascinated by science and art at a young age, Patrick first began his studies by specialising in physics and chemistry. Along the way, he found himself drawn to the creative arts. Finding the approach more intriguing, he decided to carry on down that path. He completed a Bachelor's in visual communication, followed by a Master's in media design at the University of Art and Design in Geneva (HEAD). Along the way, he worked on simulating experiences of the Aztec afterlife and the creation of serious games to teach particle physics.

Although we work with fast and powerful machines, the creative process is one that takes time. From conception, to prototyping, to testing, this repetitive cycle is limited by our human capacities. The use of Evolution-assisted design has forced me to rethink my role as a designer. I am no longer a simple user of passive tools, nor am I irrelevant to the process altogether. Initially intended for the world of aesthetic design, the process could

An unlikely superhero

LUTZ WEISCHER

Shouldn't those responsible for climate change — wherever they may be — be the ones who bear the costs of the necessary protective measures? Lutz Weischer tells the story of Saúl Luciano Lliuya, a farmer and mountain guide of the Peruvian Andes, who decided to fight against one of the biggest injustices and threats that the world is facing today: the global climate crisis. The City of Huaraz lies below the Palcacocha glacial lagoon. Since the glaciers in the Andes are melting faster and faster due to cli-

mate change, the city is threatened by a possible outburst flood from the glacial lake. Emitters of greenhouse gases must accept responsibility for the hazards associated with global warming worldwide. Saul managed to create a judicial precedent with immediate implications on the legal duties of emitters all around the globe, and he became an unlikely superhero.

Lutz Weischer is Team Leader - International Climate Policy at Germanwatch, a development and environment NGO with offices in Bonn and Berlin. He leads a team analyzing the state of the international climate negotiations and advocating for solutions that protect the interests of those most vulnerable to the impacts of climate change and that promote a transformation towards zero-carbon and climate-resilient societies. His work focuses in particular on climate change mitigation and finance. Prior to his work for Germanwatch, he worked as a research analyst for the World Resources Institute in Beijing, Washington and Frankfurt on renewable energy financing, innovation policy, technology cooperation and the links between trade and climate policy. He holds a Master in International Affairs with a specialization in sustainable development from Sciences Po Paris and a diploma in political science from FU Berlin.

Let women be the shapers of the future

NARJIS HILAIE

By the time we reach gender equality in the workplace, robots will most probably rule the world. Artificial Intelligence is coming soon, much faster than gender equality in the workplace. So it is crucial that we start thinking about how Artificial Intelligence should and could benefit all of humanity, by having women fully integrated in the Artificial Intelligence discussions and part of the decision making process.

Narjis Hilale is a citizen of the world, passionate about women empowerment. She has lived in Europe, Asia, Americas and Africa. She has 15 years experience working for major FMCG multinationals and UN organizations (Shell, P&G, JTI, Firmenich, Singtel, Vivendi, WIPO) in global leadership positions.

She is the author of the book "Woman's Essentials Box for the Corporate World".

Book Synopsis: All women need an Essentials Box, and even more when they are in the corporate world. The corporate world is still overwhelmingly a man's world, and until we reach gender equality in the workplace, women need an essentials box that has the tools that will help them survive in this world. Like any essentials box, this book is a compilation of tools and tips for women, on how to better navigate the tough waters of the corporate world.

Sam and the day after

AREA JEUNE BALLET

"Samsara" means the idea of cycle. The cycle of life. It's about movement, it's about transmutation. To move from one place to another. It's about life and death as well. It's about birth but also decay and death. Life and death become the cycle of life.

SAM (short version of Samsara) has his roots in Indian music. I work mainly with musicians that have a background in Indian music, flamenco or

traditional forms. This musicians are able to bring traditional forms into a contemporary context of "the day after".

Created in 2014, the Area Jeune Ballet offers an outstanding educational, stimulating and inspiring framework for semi-professional dancers, aged 17 to 22 years old. Multicultural and engaged, it brings together talented young dancers from all over the world: Switzerland, France, Italy, Spain, England, Poland, Brasil, Cuba and Argentina.

All pursue the Formation Supérieure de danseur interprète delivered by Dance Area. With the latest trends in contemporary dance, the Area Jeune Ballet promotes excellence of learning, tolerance and openness. It brings on stages shows of a quality professional.
